//note="Vector: pBluescript SK-; Site_1: ECORI; Site_2: XhoI; cDNA was prepared from polyA+ enriched RNA from effective root nodules harvested one month post inoculation with Sinorhizobium meliloti. The CDNA was directionally ligated into the Unit ZAP XR vector from Stratagene and packaged using Glagapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda ZAP phage using Ex-Assist helper phage and propagated in XLOLR cells."

The CDNA library was generated by directional ligation of the CDNAs in the ECORI and XhoI sites of Lambda Uni-Zap XR vector (Stratagene). The library was excised as a pBluescript placmid from Lambda Uni-Zap XR by ExAssist helper phage and plated on SOLR host cells. 2 others

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /ncce="Organisms seeds; Vector: pBluescript II KS (+) excised from Lambda Uni-Zap XR; Site_1: ECORI: Site_2: XhoI; CDNAs were derived from reverse transcription of pooled mRNA samples from stressed seedlings (germinated for 4 days in 150mM Nacl, 200mM Mannitol, submerged in distilled water and 0.3% Hydrogen peroxide). The CDNA library was generated by directional ligation of the CDNAs in the ECORI and XhoI sites of Lambda Uni-Zap XR vector (Stratagene). The library was excised as a pBluescript plasmid from Lambda Uni-Zap XR by Exassist helper phage and plated on SOLR host cells. I others

                                                                      Accessive to the most devestating fungal diseases of rice blast is one of the most devestating fungal diseases of rice world wide. It is a filamentous ascomycete with a haploid genome (1-7) of approximately 40 Mbp. Rice blast is an important model fungal pathogen for studying numerous aspects of the fungal host interaction. In order to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of 130 kbp was constructed. This library represents greater than 25% genome coverage. High density colony filters are available upon request." 5 others
